

Termite and Pest Control

Bed Bug Local Chemical Treatment Instructions

Before we arrive for our first treatment the following is a list of what you need to do to be ready for treatment:

Start by bagging **all fabric items** in the room(s) to be treated. This includes, but not limited to, all clothing, bedding, linens, and curtains. **Place all of these items in bags to be taken to a commercial laundry facility, wash in extremely HOT water and Dry for 30 minutes on high heat or at a temperature of 175°.** **DO NOT wash clothing AT YOUR HOME as you may spread the infestation around.** You must either remove and dispose of all furnishings that are stuffed, such as mattresses, box springs, sofas, chairs, etc...

Or we can Fumigate your belongings in our chamber to eradicate ALL bedbugs and their eggs. This will eliminate the need to replace infested furnishings, thus saving you money! See below for chamber pricing.

Now your room(s) should be mostly empty.

Initial Treatment & 2nd Treatment:

We will take out your empty drawers and spray them, then we will spray the under side of the dresser. We will then spray all the walls and the carpeting very heavy for bed bugs. After this, the home will need to stay vacant as the bed bugs will be actively trying to avoid the pesticide. You must vacate the premises for a minimum of 24 hours.

After Initial Treatment:

On the second day you may return to the room with some exceptions, **NO MATTRESS!** You will need to use an air mattress for the entire treatment process, several weeks, before it is safe to put bedding back. We recommend that you don't avoid sleeping in the infested room, because the bed bugs will find you and possibly spread the infestation to other rooms. We also recommend waiting to put back your clothes and personal items for two reasons. First, you could re-infest your belongings and second, you have to do this 3-5 more times, so the less you have to move the better.

Treatment #3 & #4

As like the first treatment we need everything out of the room(s) so we can treat everything. During treatments #3-4 we recommend you be out of the home for at least 12 hours.

After Treatment #2-4

Like before, you may put the air mattress in the room and sleep on it, but wait until after the **4th** treatment to start moving your clothes, shoes, toys, etc. back in the room(s).

Inspection/Treatment #5 & #6

If you have followed instructions to this point it will be easy from here. For the next month we will come out every other week to inspect and treat if necessary! You won't have to take everything out, we will be able to spray around your belongings. You still need to make as much carpet available to us as possible. If treatment is necessary, you will need to be out of the home for at least 4 -6 hours.

Note:

Since we do not know how you originally got the bed bugs, use caution when you or your children stay somewhere other than your home. Also, use extreme caution if bringing home used furniture. Best rule of thumb....don't bring home used furniture.

Fumigation chamber: \$350.00 - 1 item or a full container

D&S Termite & Pest Control will not be responsible for pick up/delivery or loading/unloading of belongings.
